---

Titan's own product range are all based on the Pelton wheel technique. This well proven method is the ideal way of measuring low rates of flow of low viscosity liquids. Our comprehensive ranges of radial flow turbine meters offer a selection of products for many differing types of application. Some are suitable for chemical plant others for the semi-conductor industry and others are ideal for drink dispense or beer monitoring equipment. All have rugged bearings and excellent repeatability. The choice of fitting type reflects the function of the meter, some have simple hose barbs and others may be fitted with custom designed process connections to suit a OEM installation.
